Experience

Clientbridge Founder — April 2026 – Present

- Booking, invoicing, card payments and provincial sales tax for Canadian service businesses, on web, iPhone and Android
- One atomic, audited, idempotent command path for every write, and one tenant-scoping helper for every read
- Offline-first mobile and web over a local replica, with anything that moves money settled on the server
- Sales tax across all thirteen provinces and territories, past invoices still using the rate on the day of supply
- Online booking with deposits, an online shop, memberships, packages and gift cards, and payouts to the owner's bank

Technologies: Python, FastAPI, PostgreSQL, React, Expo, PowerSync

Mapbox Staff Software Engineer — March 2024 – April 2026

- Greenfield logistics backend: service architecture, public API request handling, data model and job processing
- First production version of that offering, built alongside the team that joined by acquisition
- Billing metered through the existing API-based system by defining the offering's billable units
- Shared CloudFormation tooling in JavaScript extended into recipes that provision groups of AWS resources as one unit
- Navigation SDK and API work on route lifecycle, rerouting on off-route detection, and the drop-in UI components
- Matrix API work on travel time and distance across many origin and destination pairs, including non-square requests
- Studio style editor surfaces for customers building custom map UI: layer controls, style-spec expressions, versioning

Technologies: Node.js, TypeScript, React, AWS (CloudFormation, Lambda, ECS), Swift, Kotlin

Beautiful.ai Staff Software Engineer — May 2021 – February 2024

- Firebase Realtime DB to MongoDB migration: schema design, incremental sync service, dual-database clients, phased cutover
- Conversational AI presentation generation, a v2 redesign built around chat-based slide iteration and refinement
- Image generation across three providers: Flux via Replicate, Imagen and Gemini via Google, DALL-E via OpenAI
- Zoom and Google Meet integrations with a presenter view and a per-viewer audience player, in place of screen sharing
- Spreadsheet linking from slides to Google Sheets, OneDrive Excel, Airtable, Smartsheet and Zoho Sheets, syncing on change
- Mux video integration for HLS streaming, migrated from FFMPEG transcoding behind an A/B test
- Salesforce and HubSpot analytics, password-protected sharing, Microsoft auth, PDF compression, checkout redesign

Technologies: Node.js, Backbone.js, React, TypeScript, Redis, MongoDB, GCP

DevCycle Senior Software Engineer — November 2019 – April 2021

- Simulations for the Customer Journey graph: live audience data flow across ingestor, journey state, API and dashboard
- Mongo proxy service building configuration per request type, cached in CDN and Redis for internal services and SDKs
- Recommendation service drawing on several external sources, including client-specific services and Cassandra
- Feature flagging system support and maintenance, driven by customer triage: bug fixes and enhancements

Technologies: Python, Node.js, React, Redux, PostgreSQL, Docker, AWS

Thrive Savings Founding Software Engineer — February 2018 – November 2019

- Bank aggregation across Flinks, Quovo and Plaid behind one abstraction that routes each bank to its best provider
- VersaPay integration for automated card payments on the savings configuration and schedule each customer set
- SynapseFI integration for debit card issuing, letting customers spend directly from their savings account
- React Native app for iOS and Android, with the web build ported from it through react-native-web
- Backend API, background processing for transaction analysis and savings calculations, schema design, deployment

Technologies: Node.js, React Native, React, Redux, PostgreSQL, AWS

Bamba Corp. Software Engineer — February 2017 – February 2018

- Drag-and-drop canvas survey builder with branching logic, replacing a list-based interface
- Chatbot integrations taking surveys over Facebook Messenger, WhatsApp and web chat, alongside the SMS channel
- Report dashboard over aggregated survey results, with response querying and PDF export

Technologies: PHP, jQuery, MySQL, AWS

Clipwire Games Game Developer — January 2016 – January 2017

- Six Unity 3D and 2D titles shipped on Android, iOS and WebGL
- Redshift, Sticker Clicker, Bingo World Tour, Bingo Story, Game Trillionaire and Stringuistics
- Translation management web application for localizing game content and paying the translators

Technologies: Unity3D, C#, PHP, Laravel, jQuery, MySQL, AWS

Education

BS in Computer Science
University of Waterloo
December 2015 · Waterloo, Canada

Awards

International Mathematical Olympiad (IMO)
Bronze and silver medals · 2009 to 2011

Products

Clientbridge — Live
For Canadian service businesses, from one person to a small team. Booking, payments and sales tax on web and mobile.
clientbridge.ca

Galleo — Live
Decks, documents and websites from one set of content blocks.
galleo.app

Lumischool — Live
Illustrated lessons for children aged 5 to 12, with a map to explore.
lumischool.ai

FlowMaestro — Demo available
AI workflows and agents over shared integrations, tools and memory.
flowmaestro.ai

LlamaTrade — Personal use
Trading strategies, backtested on historical data and run through a broker.
llamatrade.ai

Also built

BranchPad — Desktop app
A macOS app for terminals, coding agents and stacked Git worktrees.

Sourcewell — Waitlist
Recruiting outreach with contact records, message sequences and reply tracking.
